# Project 525 CCIE Enterprise Infrastructure

A structured and mentored approach  
to become a CCIE in one year

The 525 project is a mentored 12-month program, created in partnership with Cisco, that aims to get candidates ready to take and pass their CCIE exam. Systematic study deepens your understanding of the field and our 525 program provides a structured pathway for disciplined learning, repeated practice, and skill mastery, enabling individuals to perform tasks more effectively and efficiently. The program involves a combination of e-learning, extensive hands-on practice, and deep dives into security protocols and technologies. Students will also be mentored throughout the duration by an experienced CCIE Enterprise Infrastructure engineer.

## USE CISCO LEARNING CREDITS

Use Cisco Learning Credits (CLCs) to cover program costs.

## EXAMS CONDUCTED LOCALLY

Groups of Europe-based delegates will have the convenience of testing within their vicinity.

## PROGRESS REPORTS

Includes a pre-assessment exam to establish the delegates' competency levels, as well as the creation of exam progress reports.

## INTERNATIONALLY ACCLAIMED MENTORS AND INSTRUCTORS

Experienced mentors guide participants through the complexities of the certification process, providing personalized support to ensure success.

# Benefits of the 525 Program

- **Self-study:** Set a schedule that enables you to balance your learning with other commitments
- **Mentoring:** Mentors provide real-world perspectives helping you navigate challenges while accelerating your learning through personalised feedback
- **Technical labs:** Provide disciplined and repeated practice with the structure to help you perform tasks more effectively and efficiently.
- **Bootcamps:** Provide hands-on experience that enhances understanding of theoretical knowledge by allowing practical application with real tools and technologies

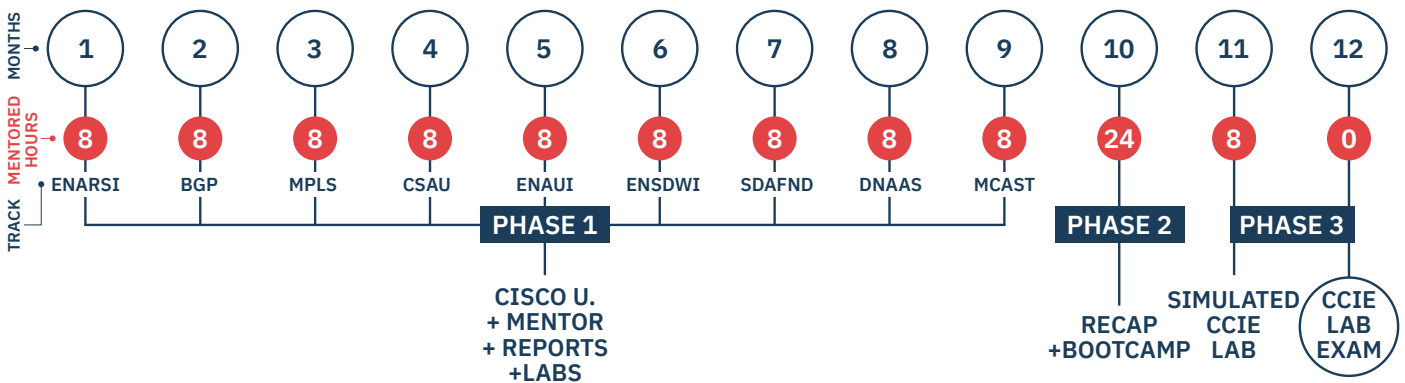

## About CCIE Enterprise Infrastructure

CCIE Enterprise is a highly sought-after certification that focuses on advanced enterprise networking knowledge and skills. It equips IT professionals with a deep understanding of designing, deploying, and managing complex enterprise infrastructures. The certification covers a wide range of topics, including network architecture, virtualisation, automation, security, and network assurance. By studying CCIE Enterprise, individuals become proficient in leveraging cutting-edge technologies to create scalable, secure, and efficient networks that meet the demands of modern businesses. This expertise is particularly valuable as enterprises increasingly embrace digital transformation, cloud adoption, and IoT integration, requiring skilled professionals who can navigate the complexities of large-scale networks while ensuring their stability and security.

### Prerequisite to Join the Course:

Implementing and Operating Cisco Enterprise Network Core Technologies (ENCOR)

## The 525 Mentored Journey to CCIE EI

### What is included:

- Cisco Modelling Labs license
- CCIE Enterprise Infrastructure bootcamp
- Mentoring from a CCIE Enterprise certified instructor
- Use of your Cisco Learning Credits (CLC)
- Simulated CCIE Lab
- Final exam lab + 1 rewrite\*  
\*subject to T&Cs
