Project 525 CCIE Data Center

A structured and mentored approach
to become a CCIE in one year

The 525 project is a mentored 12-month program, created in partnership with Cisco, that aims to get candidates ready to take and pass their CCIE exam. Systematic study deepens your understanding of the field and our 525 program provides a structured pathway for disciplined learning, repeated practice, and skill mastery, enabling individuals to perform tasks more effectively and efficiently. The program involves a combination of e-learning, extensive hands-on practice, and deep dives into security protocols and technologies. Students will also be mentored throughout the duration by an experienced CCIE Data Center engineer.

USE CISCO LEARNING CREDITS

Use Cisco Learning Credits (CLCs) to cover program costs.

EXAMS CONDUCTED LOCALLY

Groups of Europe-based delegates will have the convenience of testing within their vicinity.

PROGRESS REPORTS

Includes a pre-assessment exam to establish the delegates' competency levels, as well as the creation of exam progress reports.

INTERNATIONALLY ACCLAIMED MENTORS AND INSTRUCTORS

Experienced mentors guide participants through the complexities of the certification process, providing personalized support to ensure success.

Benefits of the 525 Program

- **Self-study:** Set a schedule that enables you to balance your learning with other commitments
- **Mentoring:** Mentors provide real-world perspectives helping you navigate challenges while accelerating your learning through personalised feedback
- **Technical labs:** Provide disciplined and repeated practice with the structure to help you perform tasks more effectively and efficiently.
- **Bootcamps:** Provide hands-on experience that enhances understanding of theoretical knowledge by allowing practical application with real tools and technologies

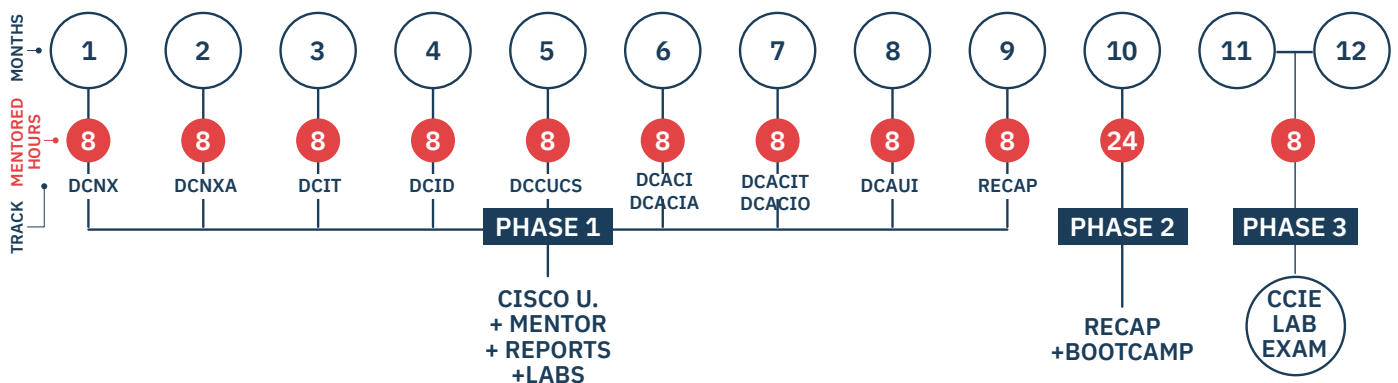

About CCIE Data Center

CCIE Data Center is a globally recognised and prestigious certification that demonstrates in-depth knowledge of modern data center technologies and infrastructure. The certification validates an individual's expert-level skills in planning, designing, deploying, operating, and optimising complex data center networks. Studying for CCIE Data Center equips you with the ability to design, deploy, and manage overlay networks, such as Cisco ACI and VXLAN EVPN, ensuring they meet the dynamic needs of modern data centers. It demonstrates your mastery of data center architecture, where you orchestrate the integration of networking, compute, and storage components. Additionally, your CCIE certified expertise will support AI and ML workloads and programmable data center fabrics. Achieving CCIE Data Center certification solidifies your role as a leader in the evolving landscape of data center technologies.

Prerequisite to Join the Course:

Implementing Cisco Data Center Core Technologies (DCCOR)

The 525 Mentored Journey to CCIE DC

What is included:

Cisco Modelling Labs license

CCIE Data Center bootcamp

Mentoring from a CCIE Data Center certified instructor

Use of your Cisco Learning Credits (CLC)

Simulated CCIE Lab

Final exam lab + 1 rewrite*

*subject to T&Cs

NIL Learning is the exclusive provider of Project 525 in Europe.
