# Project 525 CCNP

A structured and mentored approach  
to become a CCNP in one year

The 525 project is a mentored 12-month program, created in partnership with Cisco, that aims to get candidates ready to take and pass their CCNP exam. Systematic study deepens your understanding of the field and our 525 program provides a structured pathway for disciplined learning, repeated practice, and skill mastery, enabling individuals to perform tasks more effectively and efficiently. The program involves a combination of e-learning, extensive hands-on practice, and deep dives into security protocols and technologies. Students will also be mentored throughout the duration by an experienced CCNP engineer.

## USE CISCO LEARNING CREDITS

Use Cisco Learning Credits (CLCs) to cover program costs.

## PROGRESS REPORTS

Includes a pre-assessment exam to establish the delegates' competency levels, as well as the creation of exam progress reports.

## INTERNATIONALLY ACCLAIMED MENTORS AND INSTRUCTORS

Experienced mentors guide participants through the complexities of the certification process, providing personalized support to ensure success.

### Project 525 offers all tracks for CCNP certification

Enterprise Infrastructure | Wireless | Service Provider | Security  
Data Center | Collaboration | Automation | Cybersecurity

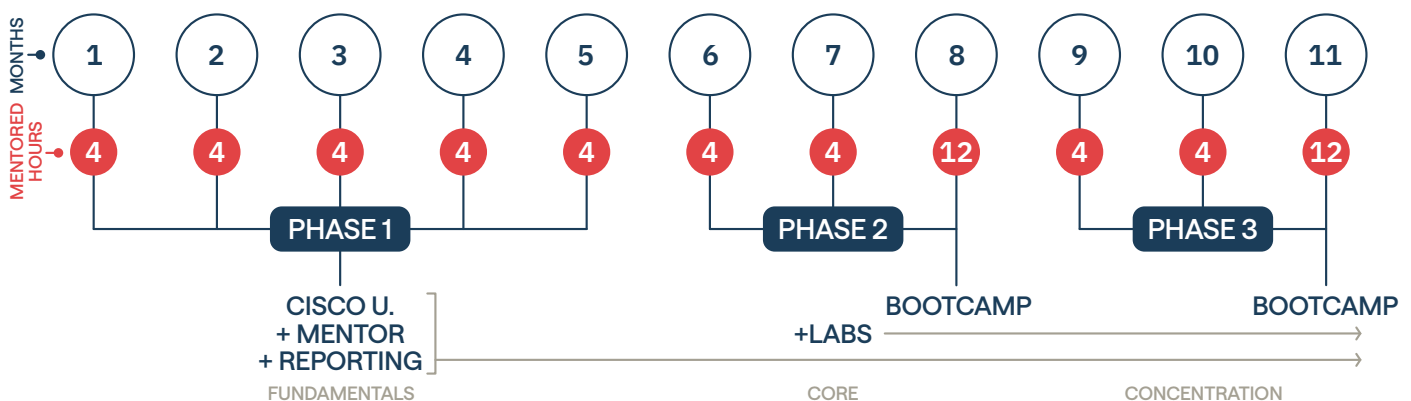

# Benefits of the 525 Program

- **Self-study:** Set a schedule that enables you to balance your learning with other commitments
- **Mentoring:** Mentors provide real-world perspectives helping you navigate challenges while accelerating your learning through personalised feedback
- **Technical labs:** Provide disciplined and repeated practice with the structure to help you perform tasks more effectively and efficiently.
- **Bootcamps:** Reinforce theoretical knowledge already gained and prepare candidates for their core and concentration exams.

## About CCNP

Project 525 CCNP is a structured, mentor-led professional development program designed to prepare network engineers for CCNP-level certification while building real-world technical competence. The program follows a long-form, cohort-based delivery model, emphasising depth, consistency, and accountability. It is designed for working professionals who require structure, guidance, and disciplined progression.
